Apple Rubber Supply Chain Announcement

Apple Rubber wants to share a quick update on current global conditions and how they might affect supply chains in the next few weeks.

While there's been more focus on developments in the Middle East and worldwide logistics networks, we want to assure you that our operations are stable and continue to run smoothly. At present, we are not facing any disruptions to supply or service, and we are well-positioned to meet your ongoing needs.

However, recent rises in global oil prices are starting to impact key cost factors across various industries. Since many raw materials used in rubber manufacturing are petroleum-based, increasing oil prices can directly influence material costs, production, and transportation. Although we haven't seen any immediate changes, we are actively monitoring this situation alongside our supply partners.

Our team maintains strong relationships with our suppliers and keeps a close eye on logistics conditions, including transportation routes, transit times, and raw material availability. While there are signs of potential market volatility, we haven't observed any immediate effects on our current commitments.

As always, we recommend sharing future projections when possible, as this helps us plan better and continue providing the high level of service you expect. We remain dedicated to supporting your business, regardless of broader supply fluctuations.

We will keep you updated should any significant changes occur. In the meantime, please trust in our ability to deliver consistent, reliable service.

Thank you for your continued partnership and trust. For any further questions or additional information, please contact info@applerubber.com.
